

How to dispose of BIO WASTE

What can we put in the bin?

All kind of fruits and vegetables, eggs, and eggshells, cooked meat and fish leftovers, grain, rice and pasta, bread and cookies, teabags and coffee grounds. Used napkins and kitchen rolls can also go into the bin.

But this is not permitted!

Plates, trays, cups, boxes and other things out of cardboard or plastic must not go into the bin.
Same goes for babys diapers.

Specialized bags!

The contents from this collection goes to composting at the Gámaþjónustan plant and therefore we must use bags that dissolve in the process. They can be made from special paper and biological starch.
Please seal the bags carefully prior to putting them into the bin.

Plastic bags must not be used!

Different bins?

Different solutions can be used indoors, but Gámaþjónustan can provide a small ventilated bin called "MaxAir" which is ideal for domestic use and smaller cafeterias. For bigger kitchens and restaurants we use ca. 40 liter bins. Outdoors we use sizes from 120 to 500 liter ready for the collection of the material.

Any questions? Please phone 535 2510.
